

## ADDITIONAL OPTIONS of the textile ERP SOLIN

SOLIN is a standard business software (ERP / CRM) for textile companies. It integrates within a single database, the data and functions related to Sales, Purchasing, Stocks, Production-Logistics and subcontracting for all textile trades.

*To learn more about SOLIN, refer to the documentation of the package.*

To complete this integrated tool, SCHAEFFER PRODUCTIQUE developed extensions available as optional modules that communicate in real time with the central system of the company.

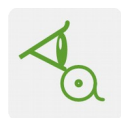

### Web collaborative

Web application portal for the extension of the textile company's information system to all stakeholders of its ecosystem.

### CB Mobile

Logistic applications on mobile terminals with Barcode for inventory, production tracking and shipments.

### Visit

Ergonomic application of quality management on touch screens. Identification and positioning defects, valuation and calculation of qualitative choice.

## Other know-how

- Mobility : Custom applications on mobile devices, tablets and smartphones.
- Business Intelligence : Connectors on request for the provision of data to standard BI applications.

## Web Collaborative

Web collaborative Module is a private web portal with online applications available to internal people and / or external to the company. It communicates in real time and securely with the information system. The portal is accessible through a standard web browser and requires a login / password with access rights. The standard functions provided with the portal can be customized to each organization uses.
